

# Edu Tutor AI: Personalized Learning

Generative AI with IBM

## TEAM LEADER :

A. Vaishnavi

## Team Members :

K. Vardhini  
J. Jayalakshmi  
B.G.Sujith

### **Project Description:**

EduTutor AI uses the Granite model from Hugging Face to create simple, personalized learning tools like concept explainers, quizzes generator and add more functionalities that you like. This project is deployed in Google Colab using Granite for low setup effort and reliable performance.

### **Pre-requisites:**

1. Gradio Framework Knowledge : [Gradio Documentation](#)
2. IBM Granite Models (Hugging Face) : [IBM Granite models](#)
3. Python Programming Proficiency : [Python Documentation](#)
4. Version Control with Git : [Git Documentation](#)
5. Google Collab's T4 GPU Knowledge : [Google collab](#)

### **Project Workflow:**

Activity-1: Exploring Naan Mudhalavan Smart Interz Portal.

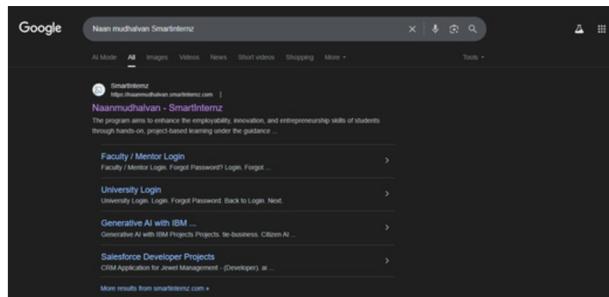

Activity-2: Choosing a IBM Granite Model From Hugging Face.

Activity-3: Running Application In Google Colab.

Activity-4: Upload your Project in Github.

## Activity-1: Exploring Naan Mudhalavan Smart Interz Portal.

- Search for "Naan Mudhalavan Smart Interz" Portal in any Browser.

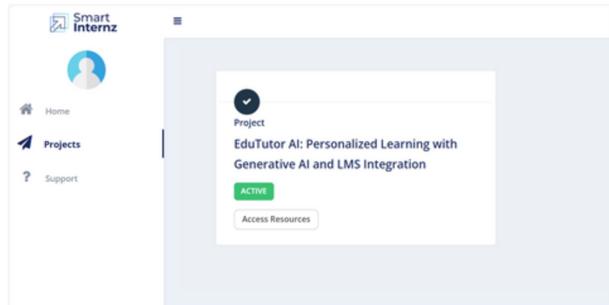

- Then Click on the first link. ([Naanmudhalvan Smartinternz](#)) Then login with your details.

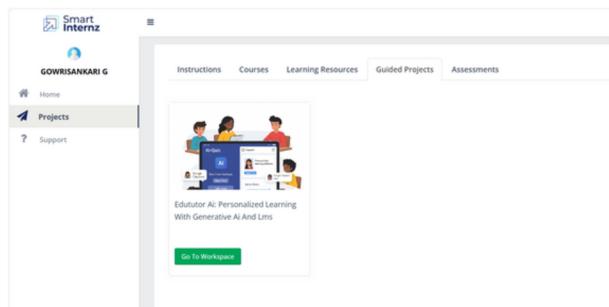

2

- Then you will be redirected to your account then click on "Projects" Section. There you can see which project you have enrolled in here it is "EduTutor AI".

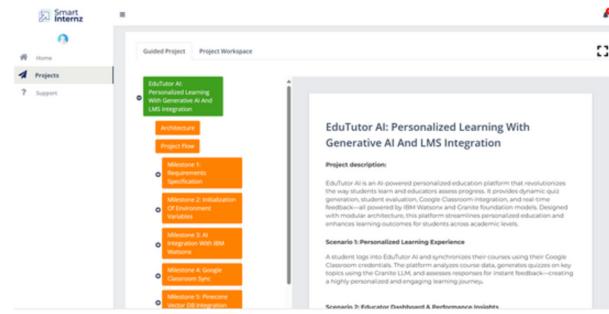

- Then click on "Access Resources" and go to the "Guided Project" Section.

3

- Click on the “Go to workspace” section. Then you can find the detailed explanation of Generative AI Project using IBM Watsonx API key.

- Click on “Project Workspace”, there you can find your project progress and Place to upload “Demo link”.

The screenshot shows the Smart Internz project management interface. On the left, there's a sidebar with 'Home', 'Projects' (which is selected), and 'Support'. The main area has a header 'Project Workspace' with fields for 'Project Title' (EduTutor AI: Personalized Learning with Generative AI and LMS Integration), 'NM ID' (3531876725934C95BAC564E809437), and 'Industry Mentor(s)' (No Mentor has been assigned). A progress bar shows '0.00%'. Below this are sections for 'GENERAL INSTRUCTION' (with 'Demo Link', 'View Mentor Comments', and 'View Industry Mentor Comments' buttons) and 'PROJECT DETAILS' (listing 'EduTutor AI: Personalized Learning With Generative AI And LMS Integration'). There are tabs for 'TASK & PROGRESS' (set to 'INTERMEDIATE') and 'MENTOR REVIEW'.

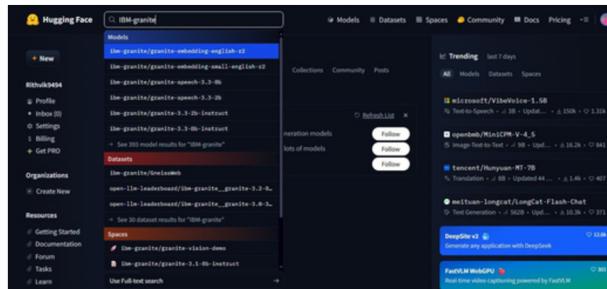

- Now we have gone through portal understanding, now lets find a IBM granite model from hugging face to integrate in our project.

**Activity-2: Choose a IBM Granite model From Hugging Face.**

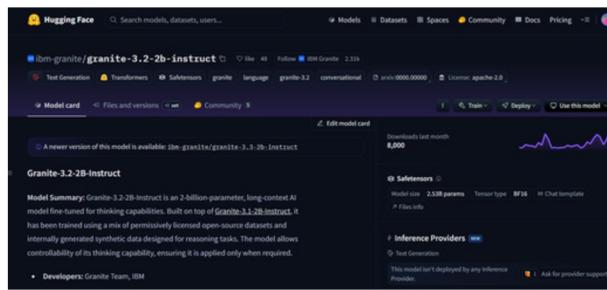

- Search for "Hugging face" in any browser.

The search results page for "Hugging Face" on Google shows the official Hugging Face website at the top. To its right is a summary box for "Hugging Face - Wikipedia". Below the search results are links for "Models", "Datasets", "Documentation", "Log In", and "Sign Up".

- Then click on the first link ([Hugging Face](#)), then click on signup and create your own account in Hugging Face. Then search for "IBM-Granite models" and choose any model.

- Here for this project we are using "granite-3.2-2b-instruct" which is compatible fast and light weight.

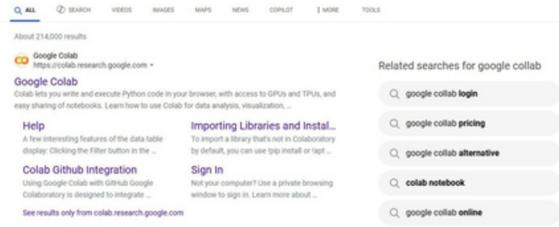

- Now we will start building our project in Google collab.

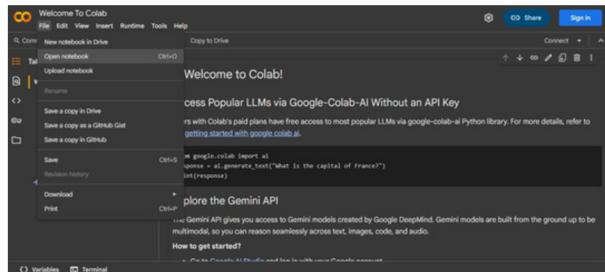

6

### Activity-3: Running Application in Google Collab.

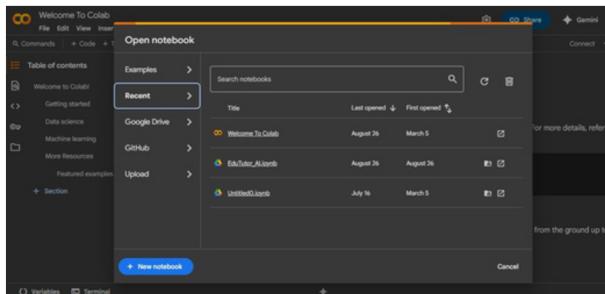

Search for "Google collab" in any browser.

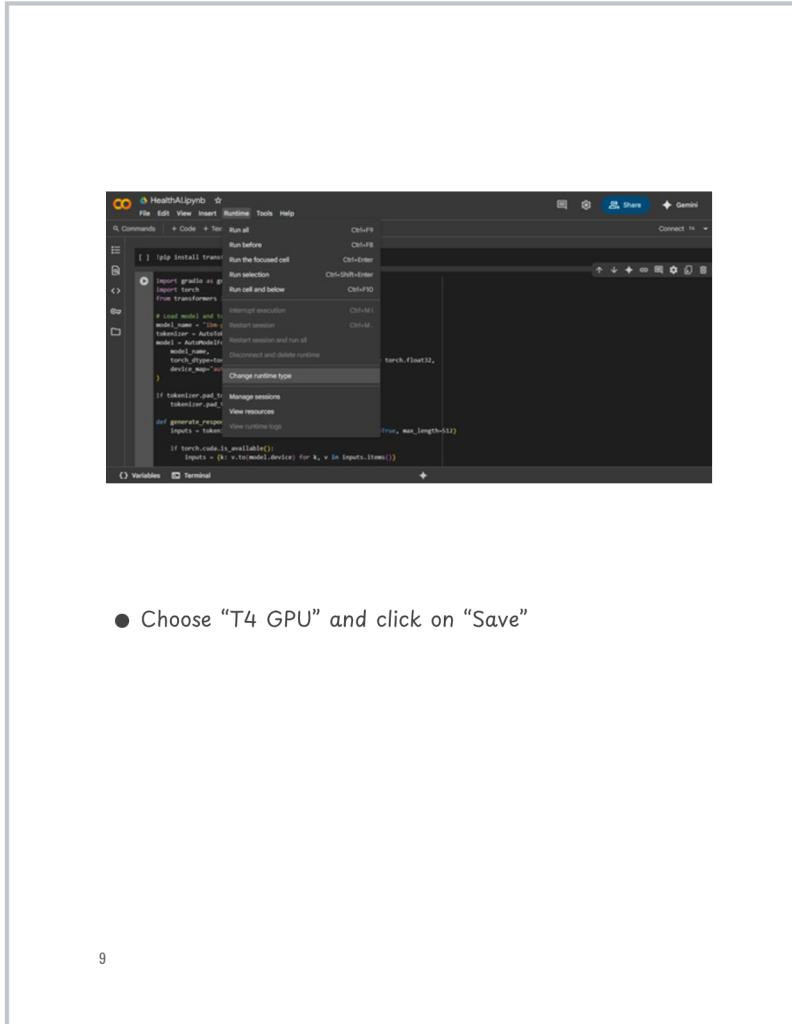

- Click on the first link ([Google Colab](https://colab.research.google.com)), then click on "Files" and then "Open Notebook".

- Click on "New Notebook"

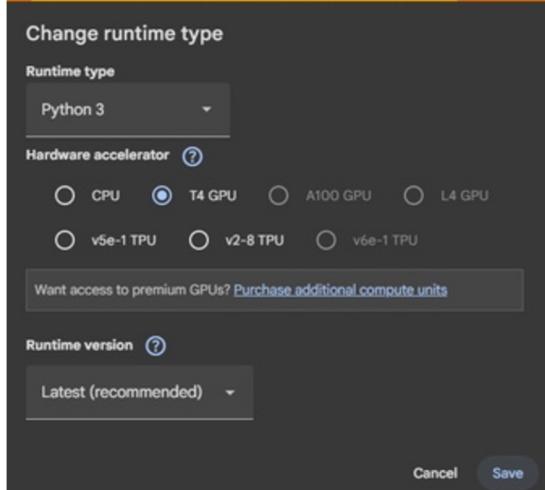

- Change the title of the notebook "Untitled" to "Health AI". Then click on "Runtime", then go to "Change Runtime Type".

A screenshot of a Jupyter Notebook interface titled "HealthAIgptnb". The notebook has one cell containing Python code. A context menu is open over the first cell, with the "Runtime" option highlighted. The "Runtime" menu contains the following options: Run before, Run the focused cell, Run selection, Run cell and below, Interrupt execution, Restart session, Restart session and run all, Disconnect and delete runtime, and Change runtime type. The "Change runtime type" option is currently selected. The status bar at the bottom shows "Variables" and "Terminal".

```
import gradio as g
import torch
from transformers import AutoModel, AutoTokenizer
model = AutoModel.from_pretrained("microsoft/DialoGPT-medium")
torch_dtype=torch.float32
device_map='auto'
if torch.cuda.is_available():
    inputs = tokenized['input_ids'].to(device)
else:
    inputs = tokenized['input_ids']
```

- Choose “T4 GPU” and click on “Save”

- Then run this command in the first cell “`!pip install transformers torch gradio -q`”. To install the required libraries to run our application.

```
!pip install transformers torch gradio -q
```

- Then run the rest of the code in the next cell.

10

- You can find the code here in this link: [EduTutor AI Code](#)

#### OUTPUT:

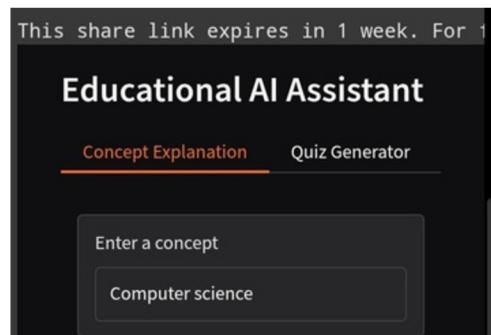

- Now you can see our model is being Downloaded and the application is

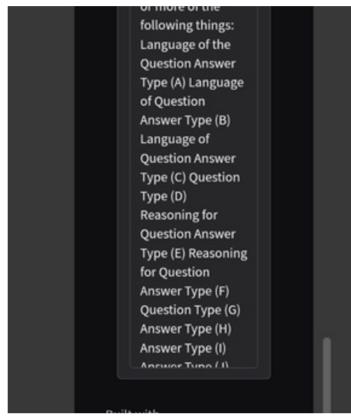

- Click on the URI to open the Gradio Application click on the link.

```
Colab notebook detected. To show errors in colab notebook, set debug=True in launch()
* Running on public URL: https://92320020f660b93f05.gradio.live
```

- You can View the Application is running in the other tab.

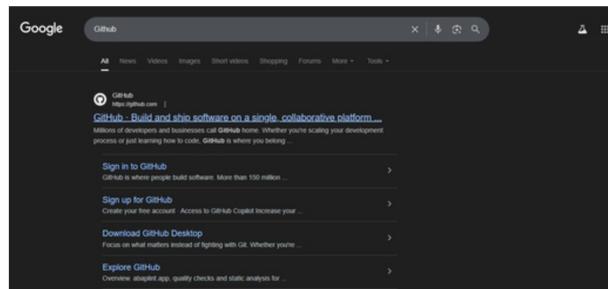

12

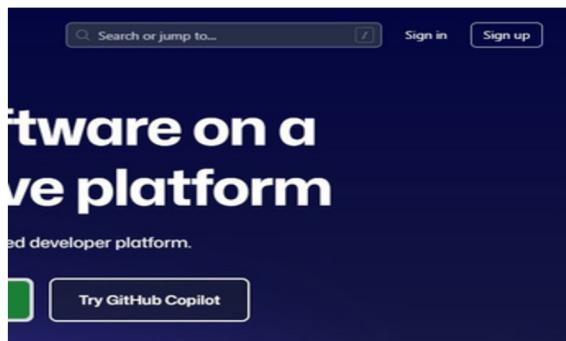

#### Activity-4: Upload Your Project in GitHub.

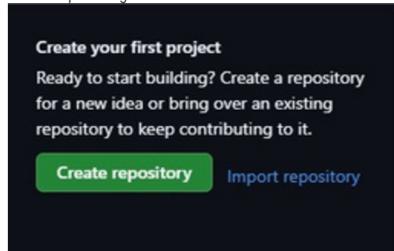

- Search for "GitHub" in any browser, then click on the first link ([GitHub](#)).

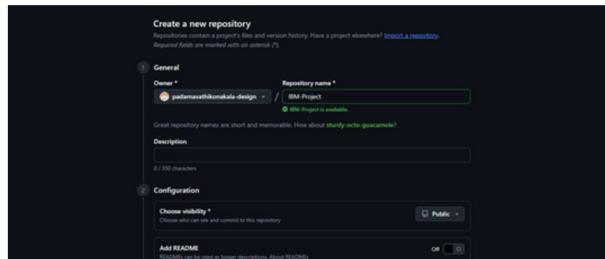

- Then click on "Signup" and create your own account in GitHub. If you already have an account click on "Sign in"

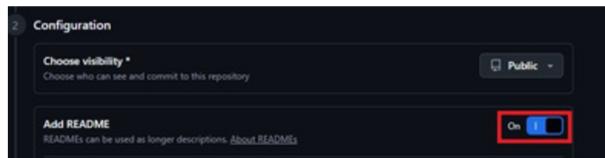

- Click on "Create repository".

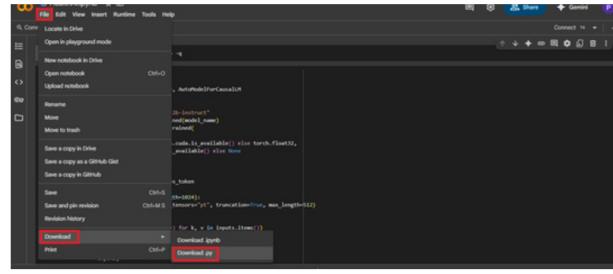

- In "General" Name your repo. (Here I have given "IBM-Project" as my repo name and it is available)

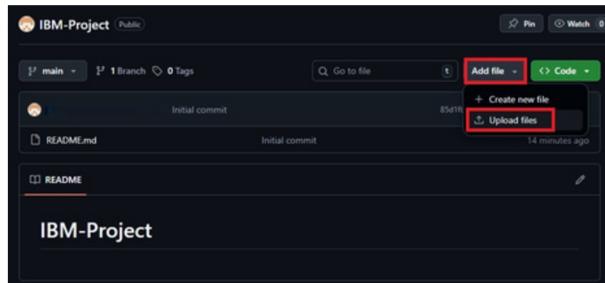

- In "Configurations" Turn On "Add readme" file Option.

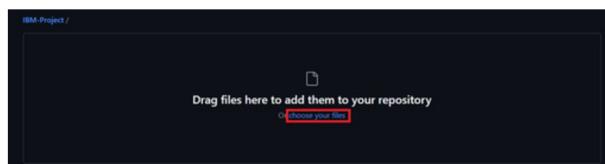

- Now Download your code from Google collab by Clicking on "File", then Goto "Download" then download as ".py".

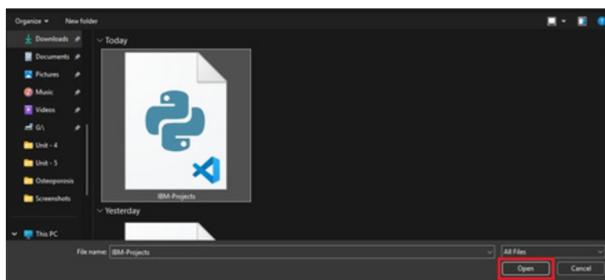

- Then your repository is created, then Click on "Add file" Option. Then Click "Upload files" to upload your files.

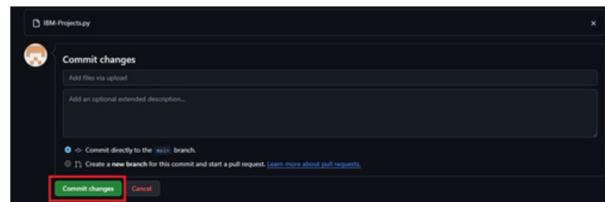

- Click on "choose your files".

- Choose your project file and click on "Open".

- After your file has Uploaded Click on "Commit changes".

**Conclusion** EduTutor AI is a revolutionary educational tool that harnesses the power of AI to provide personalized learning experiences, transforming the way students learn and interact with complex concepts.
